**Introduction to Telehealth Technologies**

**Presenter:** Mark Disselkoen, LCSW

National Frontier & Rural  
**ATTC** Addiction Technology Transfer Center Network  
Funded by Substance Abuse and Mental Health Services Administration

---

---

---

---

---

---

---

---

**Specifically, there are few substance abuse treatment programs in rural areas**

(Simons, Oliver, Gaher, Ebel, & Brummels, 2005)

**where there is substantial need**

(Rawson et al., 2002).....

**suggesting that rural probationers may have to travel long distances to receive services**

---

---

---

---

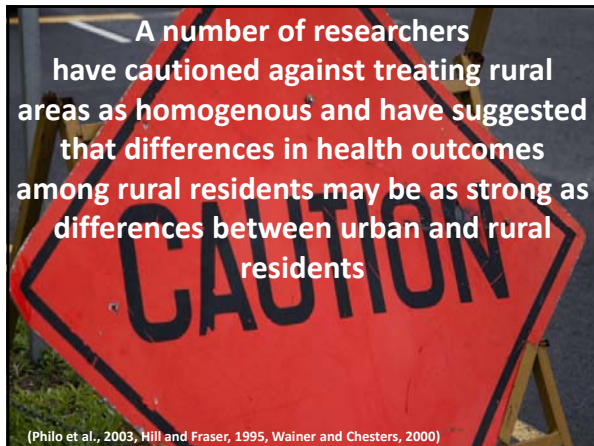

---

---

---

---

A number of researchers have cautioned against treating rural areas as homogenous and have suggested that differences in health outcomes among rural residents may be as strong as differences between urban and rural residents

(Philo et al., 2003, Hill and Fraser, 1995, Wainer and Chesters, 2000)

---

---

---

---

---

---

---

---

Johnson, 2006

**Constrained economic opportunities have contributed to an aging of rural America, with significant out-migration of younger persons**

---

---

---

---

---

---

---

---

**This may result in younger adults remaining in rural areas who are less educated and less likely to be working or earning a living wage than their peers who moved away....**

**“stay-at-home” group at higher risk for substance abuse**

(Conger, 1997)

---

---

---

---

---

---

---

---

**Over the last decade, several major studies and reports have found that rather than being a safe haven, rural areas experience significant rates of substance abuse.....**

(Van Gundy, 2006; CASA, 2000; NHDUS, 2005)

---

---

---

---

---

---

---

---

In a study of adolescents in mid-sized and rural communities, Elliot and Larson found that barriers to receiving care included

- lack of health care information
- lack of health care access
- poor insurance coverage
- parenting issues
- confidentiality concerns

(Elliott & Larson, 2004)

---

---

---

---

---

---

---

---

**Use of Technology by the General Public**

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

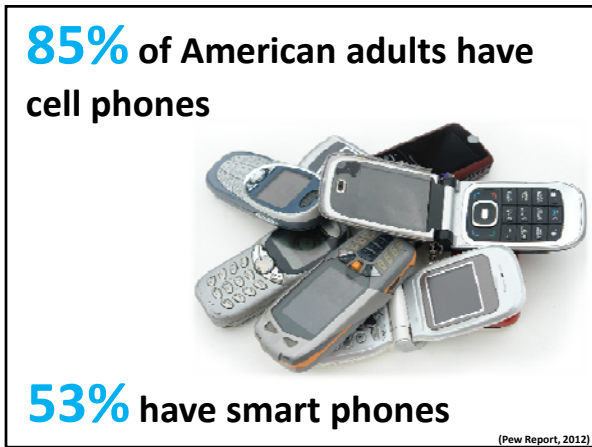

---

---

---

---

---

---

---

---

---

---

---

---

---

The internet as diagnostic tool...

-  **59%** of U.S. adults have looked online for health information in the past year.
-  **35%** of U.S. adults say they have used the internet to try to figure out what medical condition they or another may have. We call them **"online diagnosers."**
-  **53%** of online diagnosers talked with a clinician about what they found online.
-  **41%** of online diagnosers had their condition confirmed by a clinician.

<http://pewinternet.org/infographics/2013/Health-and-Internet-2012.aspx>

---

---

---

---

---

---

---

---

Peer-to-peer healthcare

-  Among online health information seekers, **16%** in the past year tried to find others who might share the same health concerns.
-  **30%** of internet users have consulted online reviews or rankings of health care services or treatments.
-  **26%** of internet users have read or watched someone else's experience about health or medical issues in the past year.

Pew Research Center/CHCF Health Survey, August 7 - September 6, 2012

<http://pewinternet.org/infographics/2013/Health-and-Internet-2012.aspx>

---

---

### Behavioral Health Workforce

- Clinical/Counseling Psychologists - **152,000**
- Mental health/substance abuse Social Workers - **138,700**
- Mental Health Counselors - **113,300**
- Substance Abuse Counselors - **86,100**
- Psychiatrists - **34,400**
- Marriage and Family Therapists - **27,300**

(US Bureau of Labor Statistics, 2011)

---

---

---

---

---

---

---

---

**75%** of workforce  
(substance abuse treatment) is over the age of  
**40**

(Knudsen, 2003)

---

---

---

---

---

---

---

---

---

---

---

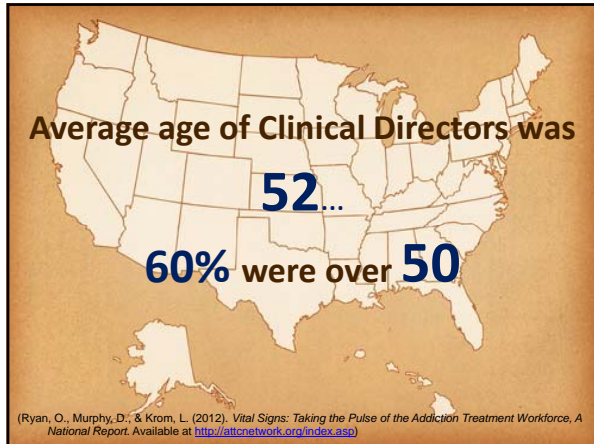

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

As Digital Immigrants learn – like all immigrants, some better than others – to adapt to their environment, they always retain, to some degree, their "accent," that is, their foot in the past.

What is Your Digital Accent

(Prensky, 2001)

---

---

---

---

---

---

---

---

(Zur, 2012; Prensky, 2001)

## Digital Natives

“native speakers” of the digital language of computers, cell phones, video games and the Internet

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

(TEDs Data; SAMHSA, 2011)

Almost **70%** of individuals who received SUD services were under the age of **40**

---

---

---

---

---

---

---

---

'One of the biggest problem facing education today is that our Digital Immigrant Instructors, speak an outdated language (that of the pre-digital age) and are struggling to teach a population that speaks an entirely new language.'

(Prensky, 2001)

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

**And then.....** advances in fax machines, word processors, answering machines, video taping, and voice mail.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

Can a meaningful clinical relationship be developed if a client and counselor do not share the same physical space?

---

---

---

---

---

---

---

---

“People meet and fall in love on the Internet.... SO why would a therapeutic relationship not also be possible?”

---

---

---

---

---

---

---

---

**TELEHEALTH**  
is not new

**1879**

(Aronson, 1977; Backhaus et al., 2012; IOM, 2012; Wittson et al., 1961; Wittson & Benschoter, 1972)

---

---

---

---

---

---

---

---

**Annually, 10 million patients receive telemedicine services**

(IOM, 2012)

---

---

---

---

---

---

---

---

**Addiction Treatment Lags Behind**

There are few published works on the use of telehealth to provide or enhance substance abuse services in rural areas.

(Balas & Boren, 2000; Benavides-Vaello et al., 2013; Ryan & Gross, 1943)

---

---

---

---

---

---

---

---

**Telehealth**  
*'the use of telecommunications and information technologies to provide access to health information and services across a geographical distance'*

**Telemedicine**  
*'use of medical information exchanged from one site to another via electronic communications to improve patient health status'*

(Institute of Medicine (IOM), 2012)

---

---

---

---

---

---

---

---

## Definitions

- Synchronous communications
  - Videoconferencing
  - Telephone
- Asynchronous Communications
  - Email
  - Web-based programs
- Some telehealth technologies include both type of communications

(IOM, 2012)

---

---

---

---

---

---

---

---

## Literature Review

- \* Videoconferencing
- \* Computer-based Interventions
- \* Web
  - Screeners
  - Support Groups
  - Virtual Reality/Video Games
  - Disease Management Programs
- \* Web-Portals
  - Videoconferencing
  - Messaging (chat and email)
- \* Telephone
  - Continuing Care
  - Interactive Voice Response
- \* Mobile Phones
  - Texting

---

---

---

---

---

---

---

---

## Videoconferencing

---

---

---

---

---

---

---

---

## VA Services

- ★ **146** hospitals provided **55,000** community-based outpatient clinic patients with **140,000** telemental health visits
- ★ **6,700** patients received home-based telemental health services
- ★ **25%** decrease in hospitalization for receiving telemental health services between 2006-2010
- ★ **30%** reduction in admissions during the first 6 months of care in 2011

(Darkins et al., 2008; IOM, 2012)

---

---

---

---

---

---

---

---

## Systematic Review of Videoconferencing Psychotherapy

- Patients and providers perceived a strong therapeutic alliance over videoconferencing
- Studies that compared videoconferencing to in-person psychotherapy reported similar satisfaction levels between the conditions
- high levels of satisfaction and acceptance with telemental health have been consistently demonstrated among patients across a variety of clinical populations and for a broad range of services

(Backhaus et al., 2012)

---

---

---

---

---

---

---

---

## Videoconferencing Studies in Addiction Treatment

- Opioid Treatment-group counseling  
(King et al., 2009)
- Alcohol Treatment  
(Postel et al., 2005)
- Alcohol Treatment  
(Frueh et al., 2005)
- Teleconferencing Supervision (TCS)- MI  
(Smith et al., 2012)

(Backhaus et al., 2012)

---

---

---

---

---

---

---

---

**Technology-Based Interventions**

---

---

---

---

---

---

---

---

To date, more than **100** different computer-assisted therapy programs have been developed for a range of mental disorders and behavioral health problems

(Klein, et al., 2012; Moore, et al., 2011)

---

---

---

---

---

---

---

---

In general, technology-based behavioral health interventions have been shown to be well accepted, efficacious and cost effective, especially when compared to standard care

Aronson, Marsch, & Acosta, 2013

---

---

---

---

---

---

---

---

Technology-based Behavioral Health Interventions

- may consist of text, audio, video, animations, and/or other forms of multimedia
- use information from medical records, physiological data capture devices, or other sources
- may be interactively customized, or tailored, to an individual user's needs

Aronson, Marsch, & Acosta, 2013

---

---

---

---

---

---

---

---

---

---

---

---

---

**Interactive Voice Response**

- Automated, computer-based interventions have shown promise in treating substance use disorders
- Fully automated systems offer a number of potential advantages including:
  - low cost
  - consistent delivery
  - greater accessibility and availability of treatment
  - increased flexibility of scheduling and convenience

(Cranford, Tennen, & Zucker, 2010; Mundt, et al., 2006)

**PAR eServices** Providers Clients Guests eNews eTraining

**Now You Can Get the Treatment You Need from the Privacy of Your Home!**

**eServices** is an alternative to traditional therapy that gives you effective intervention and counseling services on your computer. Meeting with your therapist online, at your convenience, saves you time, energy and money. All you need is a phone or internet connection.

**eServices** uses evidenced based intervention and treatment practices, practices that are proven to be effective.

**eServices** can also be used for Assessments and Evaluations, Employee Assistance Programs (EAP), Student Assistance Programs (SAP), Outpatient Services, and much, much, more...

- **Scheduling Flexibility & No Traveling**

### Privacy, Security, & Confidentiality

Privacy & Security Rules are Different

- HIPAA Privacy Rules - **What** situations can individual health information be disclosed, no matter its format (oral, paper, or electronic)?
- HIPAA Security Rules - **How** are disclosures in electronic format made?

(Karasz et al., 2012; www.hhs.gov/ocr/privacy/hipaa/understanding/srsummary.html)

---

---

---

---

---

---

---

---

### Privacy, Security, & Confidentiality

---

---

---

---

---

---

---

---

**Final Rule** specifically states because "paper-to-paper" faxes, person-to-person telephone calls, video teleconferencing, or messages left on voice-mail were not in electronic form before the transmission, those activities are not covered by this rule (p. 8342).

---

---

### Conducting Therapy Across State Lines

What each state licensing board allows/requires  
Which State governs

(American Psychologist, 2009)

---

---

---

---

---

---

---

---

### Ethical Considerations in Designing Telehealth Technologies

- How provider- or patient-centric is the technology?
- Does the shift to remote services promote the values traditionally at the heart of caregiving?
- To what extent should technology usage involve attempts to manipulate users into different behaviors?

(Kaplan & Litewka, 2008)

---

---

---

---

---

---

---

---

### Ethical Considerations in Designing Telehealth Technologies

- How might the replacement of human contact by new technologies be improved?
- To what extent is the use of technology aimed toward creating market needs over the improvement of health or well-being?

(Kaplan & Litewka, 2008)

---

---

---

---

---

---

---

---

## Ethics

“E-health is not only a technological improvement, but a re-engineering of healthcare processes requiring consideration of sociotechnical aspects of their design and development. It is meant to broaden the scope of healthcare delivery, place citizens at the center of services, and provide them increased interaction with health professionals who look after their health needs.”

(Nykanen 2006, in Kaplan & Litewka, 2008)

---

---

---

---

---

---

---

---
